

SUPEREX

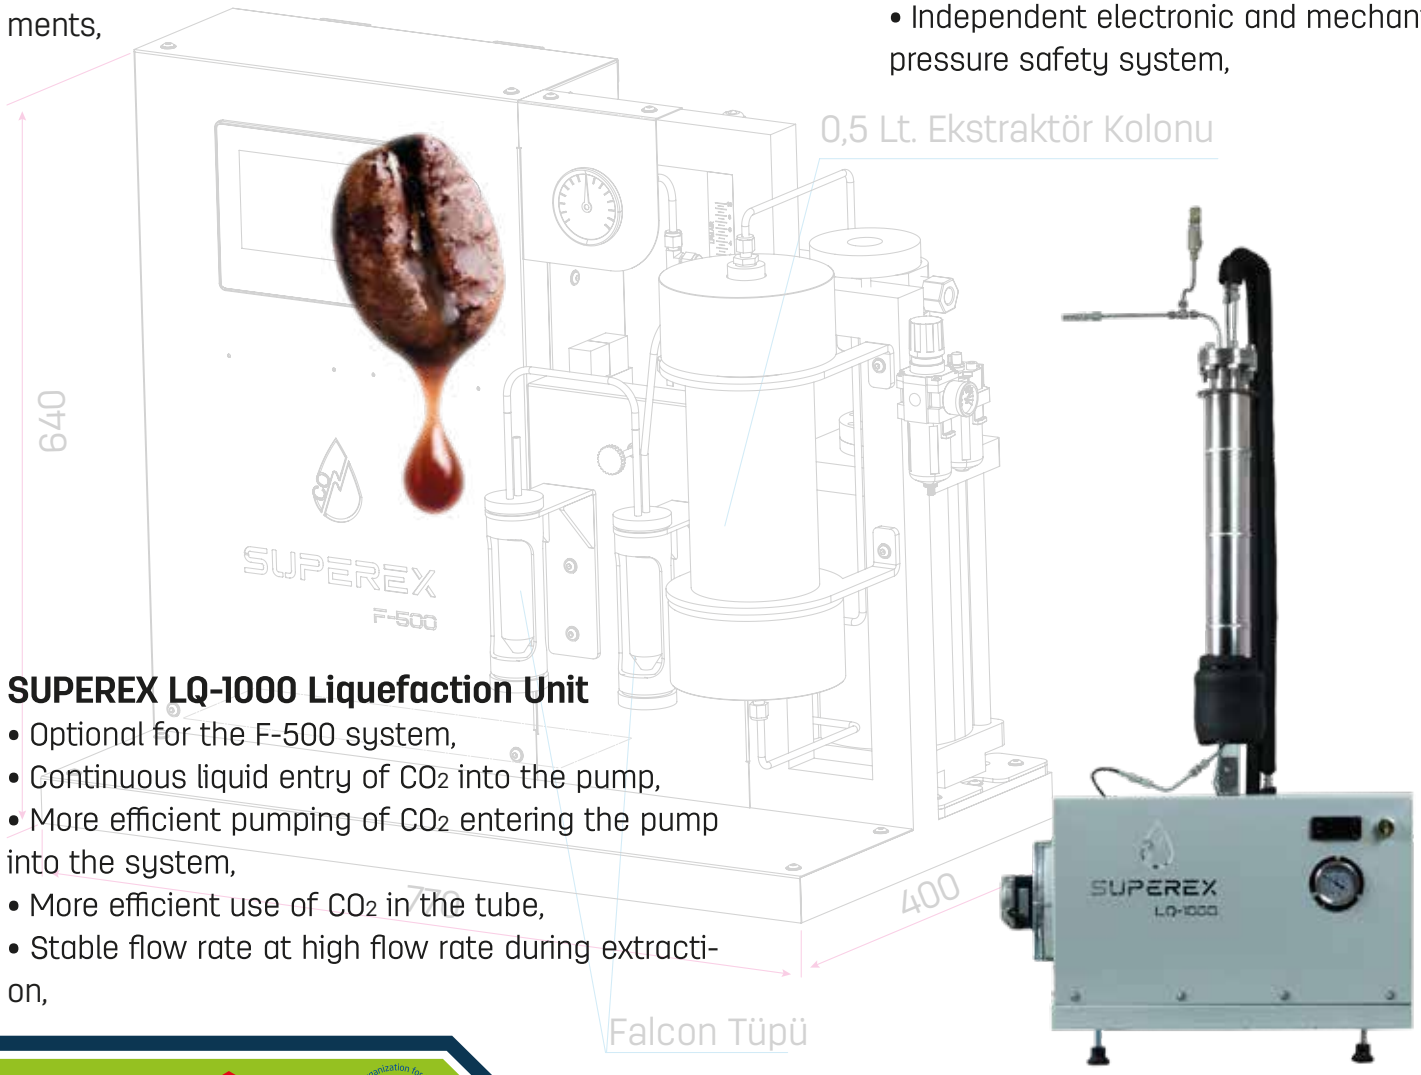

SUPERCRITICAL CO_2 EXTRACTION SYSTEMS

PRODUCT CATALOGUE

SUPEREX F-500

- 500 ml extractor column,
- Working pressure up to 345 Bar,
- Working temperature up to 70 °C,
- Extraction in Continuous (Dynamic) CO_2 flow mode,
- Temperature control with PID algorithm,
- Digital fully automatic pressure control,
- Optional Co-solvent (10 ml/min) pump,
- Easy sample loading,
- Use of synthetic fabric baskets for solid samples,
- Changeable flow direction for liquid samples,
- Possible to take extract directly into Falcon tubes,
- Liquid trapping feature in the secondary Falcon separator,
- Observable flow rate,
- Independent electronic and mechanical pressure safety system,
- All surfaces in contact with food are stainless steel,
- Smooth-honed reactor column against microbial attachments,

SUPEREX LQ-1000 Liquefaction Unit

- Optional for the F-500 system,
- Continuous liquid entry of CO_2 into the pump,
- More efficient pumping of CO_2 entering the pump into the system,
- More efficient use of CO_2 in the tube,
- Stable flow rate at high flow rate during extraction,

F SERIES

SUPEREX
SÜPERCRITICAL

SUPEREX F-1000
Counter-Flow Supercritical Extraction System
(Counter-Current extraction system)

- 1 liter extractor column,
- Extra 0.5 liter extractor column,
- With CO_2 liquefaction system,
- Working pressure up to 345 Bar,
- Working temperature up to 70 °C,
- All surfaces in contact with food are stainless steel,
- Smooth-honed reactor columns against microbial attachments,
- Special design for extraction from liquid sample,
- Extra liquid feeding pump,
- Instantly visible flow rate on the flowmeter,
- Temperature control with PID algorithm,
- Digital fully automatic pressure control,
- Easy sample loading,
- Independent electronic and mechanical pressure safety system,

YERLİ ÜRETİM TSE-HYB ISO 9001

SUPEREX SC-1000
Supercritical Extraction System

- 1 liter extractor column,
- 2 separator columns,
- With CO_2 liquefaction system,
- Working pressure up to 345 Bar,
- Working temperature up to 70 °C,
- Temperature control in separators,
- CO_2 recycling system,
- All surfaces in contact with food are stainless steel,
- Smooth-honed reactor columns against microbial attachments,
- Temperature control with PID algorithm,
- Digital fully automatic pressure control,
- Possibility to load samples with a stainless steel basket or a cloth basket,
- Gas feed or cyclone flow feature in the separators from the bottom,
- Trap solution can be added in the separators; water, alcohol etc.

SUPEREX SC-1000 Optional features

- CO_2 recovery system,
- Adding extra extractor,
- Adding extra separator,
- Pressure control in separators,
- Fully-automatic flow control/Automatic back pressure regulator(BPR),

SC SERIES

SUPEREX
SÜPERCRITICAL

SUPEREX SC-2000
Supercritical Extraction System

- 2 Liter extractor column,
- Extra 0.5 Liter extractor column,
- Working pressure up to 345 Bar,
- Working temperature up to 70 °C,
- With CO_2 liquefaction system,
- All surfaces in contact with food are stainless steel,
- Smooth-honed reactor columns against microbial attachments,
- Special design for aroma extraction from liquid sample,
- Easy sample loading and cleaning process,
- Three separators, two of which are pressure and temperature controlled,
- Replaceable cyclone flow or bottom feeding apartments in separators,
- Trap solution, water, alcohol etc. to the separators. can be added.
- Digital Automatic back pressure regulator (BPR),
- With CO_2 recycling system
- Optional CO_2 recovery feature,
- Temperature control with PID algorithm,
- Gas feed or cyclone flow feature to the separators from the bottom,

SUPEREX
SÜPERCRITICAL

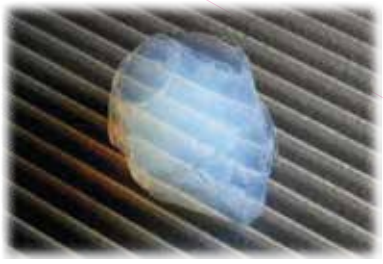

AERO SERIES

SUPEREX AERO-1000
Supercritical Drying System

- 1 liter extractor column,
- Large diameter extractor column designed for airgel drying,
- 1 separator column,
- Specially designed stainless steel baskets for loading sol-gel samples,
- Working pressure up to 138 Bar,
- Working temperature up to 70 °C,
- Liquefaction unit for stable CO_2 supply,
- A separator column where the alcohol, which is placed with the sol-gel, can be recovered,
- Temperature control with PID algorithm,
- Digital fully automatic pressure control,
- Observable flow rate,
- Adjustable CO_2 supply and discharge feature at low speeds,
- Adjustable pressure rise-drop curve,

AERO SERIES

SUPEREX
SÜPERCRITICAL

SUPEREX AERO-5000
Supercritical Drying System

- 5 liter extractor column,
- Extra 0.5 liter extractor column,
- Large diameter extractor column designed for airgel drying,
- A separator column where the alcohol, which is placed with the sol-gel, can be recovered,
- Specially designed stainless steel baskets for loading sol-gel samples,
- Working pressure up to 138 Bar,
- Working temperature up to 70 °C,
- Liquefaction unit for stable CO_2 supply,
- Full-automatic drying process (CO2 feeding, discharge and drying process is fully automatic),
- Possibility of remote control via PC and smart phone,
- An audible and illuminated emergency warning lamp, showing the instantaneous status of the device,
- Temperature control with PID algorithm,
- Digital fully automatic pressure control,
- Observable flow rate,
- Adjustable CO_2 supply and discharge feature at low speeds,
- It can be used in long drying processes (24-48 hours),
- Adjustable pressure rise-drop curve,

LQ-2000 CO_2
Liquefaction Unit
